This course uses Mymathlab which is an online grading system, with additional helps and information about the material. This software comes with electronic textbook, so a printed copy of the text is optional. All students will need a purchased access code for Mymathlab. The uses of this software will be free for about 10 days, then one must have a purchased access code to continue using.

The textbook we are currently using is Excursions in Modern Mathematics by Peter Tannenbaum, his eighth edition. We have a customized version of the textbook to help lower the cost of a new book. This is the 4\textsuperscript{th} edition for the UA. This is the book at the Student Union UA bookstore. A new customized edition comes with Mymathlab access code.

These are your options: (Count the cost before you get a used book.)

1. Purchase Mymathlab is around $105. How to do this will be given in class and posted. Printed copy of the book. Makes it easier while doing the homework and reading assignments.

2. Purchase a new customized textbook, around $156. This comes with the access code for MyMathLab. This is the best option if you want a printed version of the text.
3. Purchase a used book. You must then also purchase MyMathLab.
4. Purchase Tannenbaum eighth edition. You must also purchase MyMathLab. Some online purchases do come with MyMathLab but you should verify this first. Also the book could take too long to be delivered. (Still log into MyMathLab as state Pay Later – so you can get started while waiting for your book and code.)

If you have taken Math 105 before and you purchased a code, your old code will still work. You do not have to repurchase Mymathlab.
