

Corrigendum to
Slopes of modular forms and congruences
by Douglas Ulmer
Annales de l'Institut Fourier, **46** (1996), 1-32

The second full paragraph on page 6 should begin “On the other hand, every normalized eigenform of weight 2 and level pN is congruent after a twist to a form of level N and weight w with $2 \leq w \leq p + 1$.” (The words “after a twist” are missing in the published version.) Also, in remark 2) of page 9, “character $(\frac{\cdot}{7})$ ” should be replaced with “character χ ”.

It is a pleasure to thank Chandrashekhara Khare and Barry Mazur for bringing these problems to my attention.
